

# HANGING INSTRUCTIONS FOR SENTINEL DOME 360 DEGREE MIRRORS

SENTINEL DOME 360 DEGREE MIRROR

Provided with each Sentinel Dome 360 degree safety/security mirror is a hanging chain kit assembly (3 lengths of chain, 4 "S" hooks, 1 threaded eye bolt). See above drawing for hanging instructions. For best extended viewing, 8-10 feet from the ground is the recommended hanging height for your Dome Mirror. Where high ceilings are present, heavy wire can be used between the threaded eye bolt and "S" hook to lower your mirror to your desired height. Dome Mirrors can also be attached directly to the ceiling or wall.

If you have purchased our 24" Sentinel Dome 360 degree mirror, it can easily be hung from a suspended ceiling where 24" ceiling tiles have been used. Simply lift up the ceiling tile and insert the flange of the Dome mirror so it rests on top of the "T"-Bar ceiling tile hangers. Drop the ceiling tile back into place on top of the Dome mirror. If this installation is used your chain kit is not needed.
